Dear Jim

Pleasure to say our science and technology innovation is peaceful .but do a data security breach is apart of the transparency openness? or breach of trust The Abstract transfer results or assists in developing proof-of-concept prototypes of nanoscale products, devices, or processes; (in the sense a computer scientist cannot be further decomposed, that they come to us without being able to be defined, as "point" and "line" come in geometry) and disjoint (they are orthogonal, like vectors in nonintersecting planes).it takes time , cost and will to re-engineering the innovation Abstract (IP) system from the ground up, the innovation architecture could help new or existing world power remain a global leader going forward that is away from a non-infringing designs.

Our Evolutionary algorithms now surpass human design, cornerstone ideas for lucrative new markets. . "It's pretty terrifying exploited prospect (our brief Abstract or abstract) remained highly theoretical very conceptual after plenty of lead time in which you study precisely how a novel technology works and develop -infringing way to do the same thing without our consent.

The report indicates derivative technology, which researchers at the Sandia made successful PROJECT ACCOMPLISHMENTS SUMMARY. Cooperative Research and Development Agreement (#1714) Now the extorted theory could harm investing ideas, although for once we heard the battle lines have nothing to do with religion. If there's a new reason to keep our Abstract applications secret. Do your economic security bearing fruit?. Please Let us know!

best regard

Ahmed Ali
